

3rd Avenue West Water Main Replacement Project

Project Description

The Fremont to Queen Anne Water Main Replacement Project will construct a new 24-inch feeder main in a utility tunnel (referred to as a “utilidor”) under the Ship Canal between Fremont and Queen Anne. The new feeder main (feeders provide drinking water service and benefits to a broader geographic area) will replace an existing main that had served Seattle for almost 100 years and had reached the end of its service life. In addition to conveying drinking water across the Ship Canal, the new main will improve pressure, fire flow (the flow rate of water from hydrants used by firefighters) and drinking water quality service levels in Ballard, Interbay, Magnolia, Queen Anne, and Fremont, as well as service reliability in these areas in the event other drinking water infrastructure is disrupted.

Location

The project will be constructed in Queen Anne at West Ewing Mini Park, in the utilidor under the Ship Canal, and in Fremont near 2nd Avenue NW and NW Canal Street.

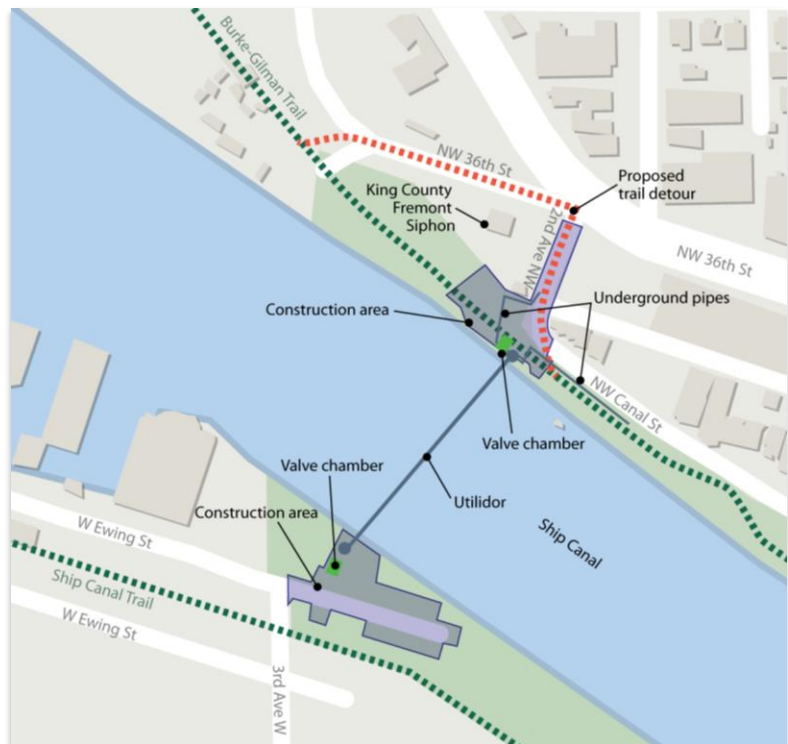

Timeline

Construction is anticipated to begin in November 2018 and be complete by mid-to late 2019.

Anticipated Impacts

SPU will notify the public in advance of construction activities. During construction, customers can anticipate:

- Increased noise, dust and construction traffic
- Burke Gilman and Ship Canal trail detours
- Roadway detours on or near 2nd Avenue NW and NW Canal Street
- Roadway detours on W Ewing Street near 3rd Avenue W
- West Ewing Mini Park parking lot to be closed
- Staging of equipment and construction vehicles near the project area
- Detour signage for vehicles, pedestrians and cyclists
